...

Unless the land is totally flat, rivers of water run downhill. A large percentage of the planet's river flow is in a southerly direction because the source (usually in the mountains) is to the north of the mouth. If the source of a river is at a higher elevation than the mouth, that river will run from the source to the mouth.

## **Rivers That Flow North - Worldatlas.com**

The Tigris, the Euphrates, the Mississippi, the Amazon, the Yangtze. The world's great rivers. And every one of them finds its way to the ocean." — Alison McGhee, *All Rivers Flow To The Sea*

## **Major Rivers That Flow North**

Most of these questions come from Americans who, for some reason, must presume that since the Mississippi flows south, all rivers on the planet flow south. Thus, to hopefully educate the world about the goals and desires of rivers, I've written a new article called, *Rivers Flowing North* .

## **Do All Rivers Flow South? - ThoughtCo**

For alluvial streams, straight and braided rivers have very low sinuosity and flow directly down hill, while meandering rivers flow from side to side across a valley. Bedrock rivers typically flow in either a fractal pattern, or a pattern that is determined by weaknesses in the bedrock, such as faults, fractures, or more erodible layers. Rate
