The pressure loss through a butterfly valve is small in comparison with the gate valve. The L/D ratio for this type of valve is approximately one-third of that of a gate valve. Butterfly valves are used in large and small sizes. They may be hand wheel-operated or operated using a wrench or gearing mechanism.

Butterfly Valve - an overview | ScienceDirect Topics

There are multiple butterfly valves that are 60" in diameter. The total throughput is around 250,000 gpm from 6 valves. The issue comes through lack of maintenance of the valves and sand working its way on the seal and damaging the bushing, causing the leak. It is a significant leak on each valve.
