Computer Speaker Connections Guide

A –If using a separate DAC, connect a USB cable from your computer to the DAC, then use an audio cable to connect the DAC to your powered speakers. If you have a separate amp with a DAC built in, do the same, connect the USB out on your computer to the USB in on your DAC/AMP. In some cases, you may have a DAC like the Audioquest Dragonfly.

How to Connect Your Speakers to Your Computer | Audio Advice

On most portable speakers, the right-channel speaker is the "main" speaker with the volume knob, and it often has two or more wires coming out of the back. One of these wires should connect to the left speaker, and another should have a 3.5 mm mini plug that connects to your computer's audio output jack. If your speakers require a power source to amplify the audio, there should also be a power cord.

How do I connect computer speakers?

These work best with the spring-loaded clip type of speaker connectors, which you find on less expensive receivers and speakers. Pin connectors also work with the preferred five-way binding posts found on better models. Spade lugs: These U-shaped connectors fit behind the screws on a five-way binding post. You slide the open part of the U over the post and then screw down the plastic nut.
