Introduction to Design for Manufacturing & Assembly

DFMA is a combination of two methodologies, Design for Manufacturing (DFM) and Design for Assembly (DFA). This combination enables a product design to be efficiently manufactured and easily assembled with minimum labor cost.

DFM/DFA | Design for Manufacturing / Assembly | Quality-One

Design for manufacturability (also sometimes known as design for manufacturing or DFM) is the general engineering practice of designing products in such a way that they are easy to manufacture. The concept exists in almost all engineering disciplines, but the implementation differs widely depending on the manufacturing technology.

Design for manufacturability - Wikipedia

The present day concurrent engineering design process gained importance with the concept of design for "X." The process focuses on a number of design goals where X could stand for assembly, manufacturability, quality, life cycle, and so on.
