Differential And Integral Calculus By

Differential calculus and integral calculus are connected by the fundamental theorem of calculus, which states that differentiation is the reverse process to integration. Differentiation has applications to nearly all quantitative disciplines.

Basic calculus explains about the two different types of calculus called "Differential Calculus" and "Integral Calculus". Differential Calculus helps to find the rate of change of a quantity whereas integral calculus helps to find the quantity when the rate of change is known. Important Calculus Topics:

Differential calculus is basically dealing with the process of dividing something to get track of the changes. On the other hand, Integral calculus adds all the pieces together. Differentiation deals with the calculation of a derivative which is the instantaneous rate of change of function taking into one of its variables into consideration.
