Dental implant surgery - Mayo Clinic

A dental implant is a surgical fixture that is placed into the jawbone and allowed to fuse with the bone over the span of a few months. The dental implant acts as a replacement for the root of a missing tooth. In turn, this "artificial tooth root" serves to hold a replacement tooth or bridge.

survival rates in the literature, and have been reported to be in the range of 69% to 91%. (4,5) In addition to having lower success rates than the initial implants, replacement implants often require additional soft- and/or hard-tissue grafts, longer time to heal, new abutments/crowns, and possible additional financial costs for the patient.
