### **[PDF] Javascript Objects Full Download-BOOK**

Every object has code and data and often the code works on the data that's inside the object. Some object-oriented schools of thought use method and some use message. The more purist folks tend to use messages like you're sending a message, here's the object, not the class, you're sending a message to the object.

### **Discovering JavaScript Object Notation with Douglas Crockford**

In JavaScript, an object is an associative array, augmented with a prototype (see below); each string key provides the name for an object property, and there are two syntactical ways to specify such a name: dot notation (`obj.x = 10`) and bracket notation (`obj['x'] = 10`). A property may be added, rebound, or deleted at run-time.
