Partial Differential Equations for Scientists and ...

In mathematics, a partial differential equation is an equation which imposes relations between the various partial derivatives of a multivariable function. The function is often thought of as an "unknown" to be solved for, similarly to how x is thought of as an unknown number, to be solved for, in an algebraic equation like $x^2 - 3x + 2 = 0$. However, it is usually impossible to write down explicit formulas for solutions of partial differential equations. There is, correspondingly, a vast ...

Partial differential equation - Wikipedia

A Partial Differential Equation commonly denoted as PDE is a differential equation containing partial derivatives of the dependent variable (one or more) with more than one independent variable. A PDE for a function $u(x_1, \dots, x_n)$ is an equation of the form The PDE is said to be linear if f is a linear function of u and its derivatives.

This is a linear partial differential equation of first order for μ : $M\mu_y - N\mu_x = \mu(N_x - M_y)$. 5. Two C^1 -functions $u(x,y)$ and $v(x,y)$ are said to be functionally dependent if $\det \begin{pmatrix} \mu_x & \mu_y \\ v_x & v_y \end{pmatrix} = 0$, which is a linear partial differential equation of first order for u if v is a given C^1 -function. A large class of solutions is given by ...
