The factors that result in parturition must overcome the progesterone effect that predominates during the early pregnancy period of uterine quiescence. The activity of 17, 20 hydroxysteroid dehydrogenase in fetal membranes increases around the time of parturition, leading to an increase in net 17 β -estradiol and 20-dihydroprogesterone.[54]

Endocrinology of parturition

The ultimate goal of Pathways to Pregnancy and Parturition is to give people the opportunity to understand the principles of reproductive physiology. This discipline is visual and requires the imaging of anatomical structures and physiological processes. Good visual imaging makes learning easier, less time consuming, and knowledge lasts longer.

Pathways to Pregnancy and Parturition by P. L. Senger ...

THE KISSPEPTIN RECEPTOR. The kisspeptin receptor was discovered 4 years later than kisspeptin, and was originally known as GPR54 [1]. It is a member of the rhodopsin family of G-protein-coupled receptors and is structurally similar to the galanin receptor [2,3,5]. When kisspeptin binds the receptor, phospholipase C is activated which recruits secondary intracellular messengers, inositol ...
