Physics Electricity And Magnetism Study

The study of electricity and magnetism Although conceived of as distinct phenomena until the 19th century, electricity and magnetism are now known to be components of the unified field of electromagnetism. Particles with electric charge interact by an electric force, while charged particles in motion produce and respond to magnetic forces as well.

Coulomb's law. Coulomb's law gives the magnitude of the electrostatic force (F) between two charges: where q_1 and q_2 are the charges, r is the distance between them, and k is the proportionality constant. The SI unit for charge is the coulomb. If the charge is in coulombs and the separation in meters, the following approximate value for k will give the force in newtons: $k = 9.0 \times 10^9 \text{ N} \dots$
