BIODIVERSITY AND CONSERVATION - Prashanth Ellina

CONSERVATION OF BIODIVERSITY: INSITU AND EX-SITU In-situ conservation: Conservation of a species is best done by protecting its habitat along with all the other species that live in it in nature. Ex-situ conservation: However, there are situations in which an endangered species is so close to extinction that unless alternate methods are instituted, the species may be rapidly driven to extinction.

Biodiversity and its conservation: an overview (Ecology)

Biodiversity refers to variation within the living world, while genetic diversity represents the heritable variation within and between populations of organisms, and in the context of this paper, among plant species. This pool of genetic variation within an inter-mating population is the basis for selection as well as for plant improvement. Thus, conservation of this plant genetic diversity is ...

over 1,200 km². Eight areas have been formally designated “Saudi Aramco Biodiversity Protection Areas,” and these total 900 km².

Oil and gas operations coexist with environmental ...

Biodiversity is not evenly distributed, rather it varies greatly across the globe as well as within regions. Among other factors, the diversity of all living things depends on temperature, precipitation, altitude, soils, geography and the presence of other species. The study of the spatial distribution of organisms, species and ecosystems, is the science of biogeography.

Biodiversity - Wikipedia

Biodiversity is the variety of different forms of life on earth, including the different plants, animals, micro-organisms, the genes they contain and the ecosystem they form.
