In their natural environments, tilapias are detritus feeders. They feed by “grazing,” and for longer periods than predator fish that pursue and capture prey. Therefore, it is possible to use an extended feeding regime for tank-cultured tilapia, feeding a daily ration over a period of 10 to 12 hours or longer.

Tank Culture of Tilapia (part 4)

The tank culture of tilapia can have higher labor and energy costs for pumping water and heating water than pond culture methods. As a result, the most efficient strategy for operating tanks is to keep the biomass at or near the maximum system carrying capacity and maximize feed input, while minimizing the costs of labor and energy.
