The Semantic Roles of Agents and Patients "Though semantic roles influence the grammar profoundly, they are not primarily grammatical categories. . . . [F]or example, if in some imagined world (which may or may not correspond to objective reality), someone named Waldo paints a barn, then Waldo is acting as the AGENT (the initiator and controller) and the barn is the PATIENT (the affected ...

### Definition and Examples of Agents in English Grammar

For example, in the sentence "The dog bites the man", "the man" is both the patient and the direct object. By contrast, in the sentence "The man is bitten by the dog", which has the same meaning but different grammatical structure, "the man" is still the patient, but now stands as the phrase's subject; and "the dog" is only the agent. References

### Patient (grammar) - Wikipedia

Theory Typically, the situation is denoted by a sentence, the action by a verb in the sentence, and the agent by a noun phrase. For example, in the sentence "Jack kicked the ball", Jack is the agent and "the ball" is the patient. In certain languages, the agent is declined or otherwise marked to indicate its grammatical role.

### Agent (grammar) - Wikipedia
